Skills

- Task Prioritisation
- Collaborative Development
- Agile Project Management
- Application Debugging
- Change Management
- CQRS implementation
- Full stack development
- Software design principles
- Microservices architecture
- AI coding tools

Education

STI College
Muntinlupa City
Bachelor of Science:
Computer Science
05/2012

Summary

Solution-focused professional employs analytical mindset to evaluate and improve current systems. Proven success lowering costs and boosting efficiency. Detail-oriented while maintaining understanding of big picture.

Experience

Senior Analyst Programmer

Essilor Luxottica | Muntinlupa City | Aug 2024 - Current

Develop, enhance, and support **Customer Financial Management Evolution (CFM Evolution)**, a web-based invoicing platform that lets users manage contracts and define rules for discounts and bonuses for individual customers or customer groups.

- Develop and maintain application features in C# using ASP.NET MVC 5 with Razor views, .NET Framework 4.6.1 and 4.8, jQuery, WCF, and WPF, with BizTalk (2016 and 2020) handling system integration.
- Apply **CQRS (Command Query Responsibility Segregation)** to separate read and write operations, keeping business logic cleaner, easier to test, and simpler to extend.
- Build modern, component-based front-end features with **Vue.js and Nuxt**, complementing the Razor and jQuery-based MVC layer and moving the UI toward a more responsive user experience.
- Accelerate development with **AI-assisted tools, including GitHub Copilot and Claude Code**, for code generation, refactoring, debugging, and test creation, while reviewing all output for quality and security.
- Optimise SQL Server 2016 and 2018 scripts, manage database permissions, and use Redgate tools for database comparison, versioning, and deployment.
- Build reports and data transformations using XML and XSLT, and maintain SSIS packages for data integration.
- Automate manual and repetitive tasks with Power Automate, PowerShell, Azure Functions, and Logic Apps, reducing manual effort and improving efficiency.

- Create release-ready delivery packages, including MSI installers, DacPac deployments, installation guides, release notes, and unit tests.
- Manage deployments and regression testing across development and qualification environments, using Azure DevOps and TFS Git for source control and pipelines.
- Design and run integration and end-to-end tests, using Playwright and Selenium for automated UI testing to validate module interactions and full workflows.

Tools & Technologies: C#, ASP.NET MVC 5, Razor, CQRS, Vue.js, Nuxt, .NET Framework 4.6.1/4.8, Entity Framework, ADO.NET, LINQ, Restful API, Minimal API, jQuery, WCF, WPF, BizTalk 2016/2020, SQL Server 2016/2018, SSIS, Redgate, XML, XSLT, PowerShell, Power Automate, Azure Devops, Azure Functions, Logic Apps, TFS Git, Playwright, Selenium, GitHub Copilot, Claude Code, IIS

Senior Application Support

Alloc8 | AUS | Aug 2023 - Aug 2024

Provided freelance development and production support for Alloc8's web platform, delivering real-time features and AI-powered automation while keeping the application stable, fast, and scalable.

- Built dynamic, real-time web applications using Angular on the front end and C# on the back end, with SignalR enabling live, two-way updates between server and users.
- Integrated the **OpenAI Chat Completions and Responses APIs** to automatically extract data and fill out PDF forms, reducing manual data entry and processing time.
- Improved performance and scalability with Redis caching and a data layer spanning Azure Cosmos DB and SQL Server.
- Provided ongoing production support, diagnosing and resolving defects and incidents to maintain application reliability.
- Managed source control, builds, and deployments through Azure DevOps.
- Worked remotely with an Australian-based team and stakeholders across time zones.

Tools & Technologies: C#, Angular, SignalR, Redis, Azure Cosmos DB, SQL Server, Azure DevOps, OpenAI API (Chat Completions, Responses)

Senior Application Developer

WSP USA Solutions Inc. | Jun 2022 - Aug 2023

Served as a full-stack developer on two business-critical platforms: the **Integrated Approval System** and the **Forecaster**. Together they streamline how proposals and bids are created for a wide range of private and government projects.

- Developed backend services and RESTful APIs using ASP.NET MVC Core and C#, with MSSQL as the data layer.
- Built responsive, component-based front ends with ReactJS, AngularJS, TypeScript, and JavaScript, delivering features across both applications.

- Designed and maintained data integration and ETL processes using SSIS and optimised MSSQL queries to support reporting and forecasting workloads.
- Built cloud-based automation and workflows using Azure Functions, Logic Apps, WebJobs, and SendGrid, including background processing and automated email notifications.
- Wrote unit tests with NUnit and end-to-end tests with Playwright to improve release quality and catch regressions early.
- Managed source control and CI/CD workflows with Git, GitHub, and Azure DevOps, working in an Agile team.
- Collaborated remotely with distributed teammates and stakeholders to deliver features on schedule.

Tools & Technologies: C#, ASP.NET MVC Core, ReactJS, AngularJS, TypeScript, JavaScript, REST APIs, SSIS, MSSQL, Azure Functions, Logic Apps, WebJobs, SendGrid, Azure DevOps, Git, GitHub, NUnit, Playwright, Agile

Senior Software Engineer

ATOS SYTEL PHILIPPINES | Pasay City | Jan 2021 - May 2022

Served as a full-stack developer on a suite of web and console applications used to manage and oversee Disney's digital assets, delivering features and maintaining production stability in an Agile team.

- Developed and enhanced web applications end to end using ASP.NET Core 2 (C#), with Angular and ReactJS front ends and SQL Server 2016 as the data layer.
- Maintained and extended existing ASP.NET MVC applications and console-based processes, covering new feature development, enhancements, and defect resolution.
- Designed and optimised SQL Server queries and database objects to support application functionality.
- Wrote unit tests with NUnit to validate code quality and reduce regressions.
- Diagnosed and fixed production bugs, working with the team to keep business-critical applications stable.
- Worked in an Agile environment, taking part in sprint planning, daily stand-ups, and retrospectives, with source control managed through SVN.
- Worked with Cisco tooling to support application operations. *(see note below)*

Tools & Technologies: C#, ASP.NET Core 2, ASP.NET MVC, Angular, AngularJS, ReactJS, SQL Server 2016, NUnit, SVN, Cisco Command, Agile/Scrum

Senior Analyst Programmer

Essilor Shared Services | Muntinlupa City | Jan 2017 - May 2021

Developed, supported, and modernized **Customer Financial Management (CFM)**, an enterprise invoicing platform used widely across Europe, working directly with stakeholders and technical counterparts in France.

Managed the legacy CFM V3 platform, ensuring its stability and functionality.

- Developed and maintained core invoicing functionality in C# on .NET Framework 2.0 to 4.0, integrating SharePoint 2007, BizTalk 2006, SQL Server 2008, SSIS, and ASMX/WSDL web services hosted on IIS 6.0.
- Designed dynamic, data-driven reports and automated scripting processes using XML, XSLT, Python, and PowerShell, reducing manual effort for business users.
- Built and optimised SQL Server stored procedures, functions, views, and triggers to support invoicing and reporting workloads.
- Managed application deployments to regression testing environments, resolved issues, and provided post-release support.

Facilitated the transition from CFM V3 to a modernised platform, enhancing user experience and functionality.

- Contributed to the redesign of CFM V3 into a modern web platform using ASP.NET MVC 5 (Razor), .NET Framework 4.6.1, jQuery, JavaScript, Bootstrap, BizTalk 2016, SQL Server 2016, WCF, and WPF.
- Developed and tested RESTful and SOAP APIs (JSON/XML), with CORS configuration, using Postman and SoapUI to validate integrations between modules.
- Wrote unit tests with NUnit and used .NET Reflector to troubleshoot and diagnose issues in legacy assemblies.
- Managed source control and work tracking through TFS, Git, Azure DevOps, and Trello.

Coordinated collaboration efforts and leadership initiatives to ensure project alignment across teams.

- Led weekly status meetings with counterparts in France, communicating progress, risks, and priorities across time zones.
- Provided troubleshooting and application support to keep business-critical invoicing operations running smoothly.

Tools & Technologies: C#, ASP.NET MVC 5, Razor, .NET Framework 2.0 to 4.6.1, SharePoint 2007, BizTalk 2006/2016, SQL Server 2008/2016, T-SQL, SSIS, ASMX/WSDL, WCF, WPF, REST, SOAP, JSON, XML, XSLT, CORS, jQuery, JavaScript, Bootstrap, Python, PowerShell, NUnit, Postman, SoapUI, TFS/TFVC, Git, Azure DevOps, Trello, .NET Reflector, IIS

.Net Developer

Smart Communications Inc. | Makati City | Nov 2012 - May 2017

Built and supported the **Online Purchase and Inventory System (OPIS)**, a web platform used by Smart Telecom dealers to purchase prepaid load, manage customer profiles and distribution networks, and track sales through daily, weekly, and monthly reports.

- Designed prototypes and developed production web applications in C# and ASP.NET Web Forms, working with the team to define requirements, system specifications, and delivery

timelines.

- Engineered and optimised SQL Server 2008 database objects, including stored procedures, views, triggers, functions, tables, and indexes, to improve data access and reporting performance.
- Built reporting and data integration solutions using SSRS and SSIS, and integrated services through WSDL-based web services.
- Partnered with Test Analysts on regression testing before each production release, validating system integration and functionality.
- Delivered projects on schedule and provided continuous production support, keeping the platform reliable for dealers.
- Contributed to design reviews and issue resolution, and took part in SAT and UAT activities.
- Authored unit test (UT) and VCU documentation as well as end-user guides, and reported progress to supervisors through weekly status reports.

Tools & Technologies: C#, ASP.NET Web Forms (ASPX), .NET Framework 2.0, WSDL Web Services, SQL Server 2008, T-SQL (Stored Procedures, Functions, Views, Triggers), SSIS, SSRS, IIS, CSS, TortoiseSVN, Trello, SOAPUI, NUnit
